

### ABSTRACT

A pack of paper handkerchiefs or tissues. More specifically, a pack of paper handkerchiefs having a dispensing orifice delimited by its peripheral edge, and having a closure means, such as a flap, the closure means being able to cover at least the dispensing orifice, and having an unconnected peripheral portion. The closure means extends beyond the peripheral edge of the dispensing orifice by about 2mm or more along the unconnected peripheral portion and remains attached to the pack during the operation of dispensing a handkerchief.
